

Kicks for Kaylene

Problem:

Kaylene needs to buy new shoes for soccer. She has done a little research and has decided Super Kicks are the best for her feet. She has the following three options for her purchase:

1. Shoes For You is having a sale on all sports shoes for $\frac{4}{5}$ the original cost.
2. Sneaker Barn is having a 10% off all merchandise sale. Kaylene also has a 10% discount card for Sneaker Barn. It can be combined with other offers, and the discount applies to the "final" price of the items.
3. Kaylene's mom works at Fantastic Footwear and gets an 18% employee discount.

Given that all three places sell Super Kicks for the same original price of \$120.00, I'd like you to tell me which is the most frugal choice for Kaylene to make.
